How to draw an object above or below the horizon line

Step 1: Begin with a vertical line in the center above your horizon line.

Step 2: Connect the top and bottom of your vertical line to the two vanishing points

Step 3: Define your edges of your shape by drawing two vertical lines on either side.

Step 4: Erase your extra lines that extend past your edges.

Step 5: Connect the points on the bottom of your shape to the opposite vanishing points.

Step 6: Erase your extra lines that extend further and you are finished!

Step 7: You are done with a floating shape!

This same concept is for both shapes above and below the horizon line.
